The 9 Pillars of Prosperity

The **Economic Quality** pillar ranks countries on the standard of living afforded by an economy, economic inclusiveness, anti-monopoly policy, labour force participation, trade competitiveness and openness to trade.

The **Business Environment** pillar measures a country's entrepreneurial environment, its business infrastructure, access to credit, investor protections and labour market flexibility.

The **Governance** pillar measures a country's performance in four areas: the rule of law, integrity of government, government performance and political participation.

The **Personal Freedom** pillar measures national progress towards basic legal rights, individual liberties and social tolerance.

The **Social Capital** pillar measures the strength of personal and social relationships, social norms and civic participation in a country.

The **Safety & Security** pillar ranks countries based on national security, personal safety and the security of living conditions in that country.

The **Education** pillar ranks countries on access to education, quality of education and human capital.

The **Health** pillar measures a country's performance in three areas: health outcomes (in physical and mental health), health systems, and illness and risk factors.

The **Natural Environment** pillar measures a country's performance in three areas: the quality of the natural environment, environmental pressures and preservation efforts.

The term 'country' is used to refer to the 149 societies included in the Index. These include 148 nations and one Special Administrative Region of China, Hong Kong.

*as reported in the 2017 Prosperity Index

Mapping Prosperity in 2018

Estonia (26th) is the second highest ranked country in Eastern Europe, and has made steady improvements in most pillars. For more information, see our feature on p. 46.

Norway (1st) is top of this year's Index, and is the highest ranked country for Safety and Security.

Paraguay (61st) continues to climb the rankings this year. It scores highest in Health and Personal Freedom, and is one of a number of countries that show a long term trend toward greater prosperity (see p. 49)

RANK

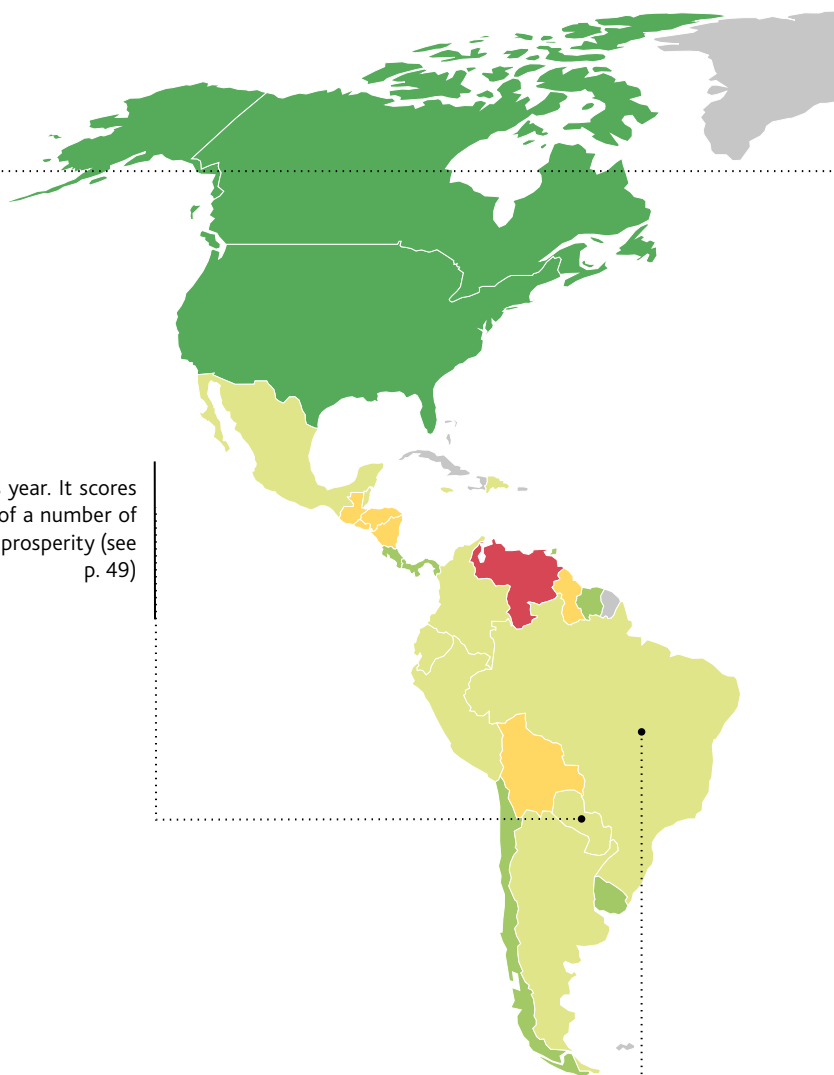

- 1ST - 25TH
- 26TH - 50TH
- 51ST - 75TH
- 76TH - 100TH
- 101ST - 125TH
- 126TH - 149TH

Several countries are not included in the Prosperity Index because we cannot access data. In many cases this is due to conflict or government restrictions preventing the collection or publication of accurate data. The ten most populous countries not included in this year's Prosperity Index are:

Myanmar
Uzbekistan
Syria
North Korea
Somalia
South Sudan
Cuba
Haiti
Papua New Guinea
Turkmenistan

Brazil (65th) has fallen more than any other country in Latin America and the Caribbean this year, largely as a result of a declining Social Capital score

Guinea (134th) has seen the largest gain since 2017, due to rises in most pillars, particularly Natural Environment and Governance.

Afghanistan (149th) has seen largest 1-year fall and comes last in this year's Index, with the largest fall in Social Capital.

India (94th) is the largest riser in Asia-Pacific over both the last year and last five years, up 19 places from its lowest point in 2013, when it was 113th.

China (82nd) sees wide variations across pillars. It is 27th in the world for Economic Quality, but comes in at 136th for Personal Freedom and 140th for Social Capital.

Romania (45th) has seen the largest 5-year rise, driven by improvements across all pillars, particularly Business Environment, Natural Environment, and Safety and Security.

Sri Lanka's (67th) Safety and Security has improved considerably, largely as a result of civil war ending – it is now ranked 83rd for Safety and Security (see p. 51).

Focus on Regions

North America increased in prosperity and is the top ranking region this year, ahead of Western Europe. There is a significant gap between North America and Western Europe and the rest of the world. These top two regions come either first or second in all pillars. Among the other five regions, each region has pillars of relative strength and weakness. For example, Sub-Saharan Africa, the weakest region, comes third on Social Capital, while Latin America and the Caribbean comes third overall but sixth in Safety and Security.

The following pages examine the strengths and weaknesses of each region and highlight the challenges faced by each.

	Prosperity Ranking	Economic Quality 	Business Environment 	Governance 	Personal Freedom 	Social Capital 	Safety and Security 	Education 	Health 	Natural Environment 
North America	1	1	1	2	2	1	2	1	2	2
Western Europe	2	2	2	1	1	2	1	2	1	1
Latin America and the Caribbean	3	5	5	4	3	4	6	5	3	3
Eastern Europe	4	4	4	5	5	7	4	3	6	4
Asia-Pacific	5	3	3	3	6	5	3	4	5	6
MENA	6	6	7	7	7	6	5	6	4	5
Sub-Saharan Africa	7	7	6	6	4	3	7	7	7	7

North America, made up of the US and Canada, is the most prosperous region in the world.

North America (1st)

Overall picture of prosperity: North America is the top-ranked region

This year is the largest overall prosperity gain North America has seen since 2007; the region has improved after a small fall last year, making it the number one region. Canada improved in all pillars except Social Capital. The US improved across all pillars excluding Natural Environment.

While the US actually improved its score more than Canada, this didn't translate into any change in global rank and it remains at 17th; Canada moved up from 11th to 8th.

Pillar highlights: strong improvements in economic and institutional pillars

The regional gain of North America was heavily driven by four pillars: Personal Freedom, Governance, Economic Quality, and Business Environment. The region remains top of the rankings for Economic Quality, Business Environment, Social Capital and Education.

Governance scores regained lost ground this year. The regional score is slightly better than last year, and Canada and the US sit at 8th and 19th respectively. After a decline last year, judicial independence scores improved in the US, and in Canada more citizens had confidence in the honesty of elections.

After a substantial dip in Personal Freedom scores during 2017, the region has exceeded 2016 levels this year, with the largest increase resulting from the number of people reporting satisfaction with freedom, which is 87%. Canada overtook New Zealand to take the top spot for Personal Freedom this year, whereas the US sits at 28th.

Canada saw a sharp fall in Social Capital, dropping from sixth place in last year's report to 11th this year. Fewer Canadians reported that they volunteered, voiced their opinion to a public official, and made donations to charity. The US increased its score overall, with more people reporting that they gave donations and received help. A recent report highlighted that, in 2017, Americans gave more than \$400 billion to US charities, the largest sum ever.

In Safety and Security, more Canadians reported consistently having available food and shelter, and in the US, there was a small fall in people feeling safe at night and the number of homicides increased slightly from 4.4 per 100,000 to 4.9.

Within Economic Quality, Canada ranked 21st and didn't register a decline in a single indicator. The US, whilst rising in score overall, saw a fall as a result of a small decline in its economic complexity score.

North America remains far above any other region for Business Environment. Canada ranks 3rd in this pillar and the US is 1st. Despite improvements this year overall, both countries received lower scores in the Logistics Performance Index, a measure of the ease of transporting goods into and across a country.

Education saw moderate improvements; more Americans and Canadians reported being satisfied with their children's schools and believe their kids are actually learning.

Both nations improved their Health scores this year, yet they still perform badly in illness and risk factors; 36% of the US population is obese, which is the second highest in the world after Kuwait, and up from 29% in 2007. Canada also has a high level of obesity, with 29% of its population obese, up from 23% in 2007.

Canada saw an improvement in the Natural Environment pillar this year, with an increase in the amount of wastewater that is treated, from 70% to 82%. In contrast, this was the only pillar in which the US declined, triggered by an increase in air pollution.

Western Europe (2nd)

Overall picture of prosperity: Slow growth

In 2018 the level of prosperity within Western Europe improved, although Western Europe scores below North America. The largest improvements come from Economic Quality, Natural Environment, and Social Capital.

The largest risers this year were **Portugal** and **Cyprus**, whereas **Greece** is the biggest faller. Norway is the world's top-ranked country.

Pillar highlights: Higher levels of Social Capital and Natural Environment, but a less safe region

Natural Environment was one of the keys to rising prosperity in Western Europe this year; gains within this pillar have come primarily from improved wastewater treatment and rising levels of marine area protection. The highest areas of marine area protection are in France and Germany, who each conserve 45% of their territorial waters.

No other region saw as large a gain in Social Capital as Western Europe. After a decline in civic engagement for the past few years, the region has bounced back from the recent slump.

However, this growth has been offset by a decline in levels of Safety and Security, falling mostly because of an increase in political terror scores.

In the spotlight: risers and fallers

Norway (1st) tops the Index this year. Its high score is driven by the best Safety and Security in the world, as well as coming in the top 10 for all but one pillar.

The **United Kingdom** sits at 7th in the Index. This year Britons have reported a greater level of Social Capital with increased civic participation, and more people reporting willingness to help others. Moderate gains in Natural Environment were also made.

There have been mixed developments in **Germany**, which ranks 14th. Higher scores of Personal Freedom came partly through legalisation of same-sex marriage in Germany towards the end of 2017, after a law passed the Bundestag on 30 June and the Bundesrat on 7 July 2017. Natural Environment also improved after a decrease in air pollution. These gains, however, have been negated by a drop in score in other pillars. For example, under the Health pillar, the prevalence of diabetes and obesity is increasing.

Malta has seen consistent improvements in its prosperity score over recent years, with notable contributions coming from improving Education and Natural Environment. Improved wastewater treatment (Natural Environment) and better human capital scores (Education) have led to Malta's rise from 26th in 2012 to 19th this year.

Greece continues to fall down the rankings, dropping three places from 2017 to 52nd in this year's Index. Greece has seen significant declines in Social Capital and Safety and Security. Greece has decreased in every single indicator in Social Capital, and, under Safety and Security, Greeks reported feeling less safe at night, and that they had property stolen more often.

Portugal has improved in almost every pillar this year, with its largest gains coming through Economic Quality and in particular an acceleration of economic growth. Within Personal Freedom, scores also went up, including reported rises in tolerance towards immigrants, and in satisfaction with freedom.

Jamaica	54	Belize	72		

Countries with populations over 1 million and not included in the Index due to lack of data: Cuba, Haiti, Puerto Rico

Overall picture of prosperity: slowing growth

Latin America and the Caribbean is the third-highest ranking region in prosperity, but is being caught up by Asia and Eastern Europe. Prosperity in the region effectively stayed the same this year and levels are still just below the high point in 2013.

The prosperity in the region's countries remain closely grouped, with the exception of Venezuela, which is ranked 126th. Whilst 15 countries increased their prosperity over the past year, the biggest of the eight fallers was **Brazil**, by far the region's most populous country, which brought the overall average for the region down.

Pillar highlights: greater focus on the environment

Safety and Security continues a decade-long fall. The largest falls came because fewer people reported that they had enough food and adequate shelter for themselves and their families. This is consistent with the trend of decline in the pillar since 2012.

Last year the Latin American and Caribbean region improved most in the Natural Environment pillar, with all but three countries in the region increasing their score. Most of these gains came from improvement in wastewater treatment and an increase in marine protected areas.

In the spotlight: risers and fallers

Colombia is one of the largest risers in the region, rising from 66th in last year's report to 57th this year. While there have been substantial gains in the Safety and Security pillar with the number of civilian casualties from conflict falling dramatically following the peace agreement signed with FARC in 2016 between President Juan Manuel Santos and the Revolutionary Armed Forces of Colombia, Colombia still ranks 131st for Safety and Security worldwide. Over a longer period, its Business Environment, Natural Environment and Personal Freedom scores have all improved considerably.

Paraguay, ranked 61st, increased its overall prosperity over the past year, with significant improvements in its Social Capital score. This was driven by more people volunteering, voicing their opinion, and more people saying they would help a stranger. For more, see our feature on Paraguay.

Brazil, ranked 65th, fell in prosperity over the past year, and over the past five years it has been the third largest faller in the region. Economic Quality has worsened following a two-year recession in 2015-16 and stagnation in its reduction of poverty. Its Governance score has declined perhaps due in part to the Petrobras scandal and the ensuing political instability. It has, however, improved its Natural Environment score by protecting more marine areas.

Jamaica has seen the greatest increase in prosperity in the region over the past five years and is the fourth biggest riser over the past year. This can be attributed to a better Natural Environment score, through a higher rate of wastewater treatment. Over the longer term, it has improved its Business Environment by making it easier to access credit and building stronger intellectual property protection. It has also seen increases in Personal Freedom (through greater social tolerance) and Governance (through improved confidence in elections and confidence in government).

Eastern Europe (4th)

Overall picture of prosperity: steadily rising

Eastern Europe's prosperity has risen steadily over the past decade. The region has been rising at a faster rate than the world average – with last year's increase the second largest of any region.

Over the past five years, all countries in the region, except Ukraine, have increased their overall score. Over the past year, all but two countries (Czech Republic and Latvia) improved their prosperity.

Pillar highlights: falling Safety and Security, and a rising Business Environment

Safety and Security declined significantly this year. Russia is the main driver of the fall in scores, but there have also been significant decreases in Poland, Moldova and Croatia. In Russia and Poland, there was an increase in the political terror indicator, a measure of state sponsored violence. In nine of the countries that fell, there were also significant falls in the reported availability of food and availability of shelter.

Within Business Environment, investor protections and the ease of starting a business have grown significantly. Strong growth in Business Environment over the past decade means Eastern Europe is now at almost the same score as the rest of world average for this pillar, although there are significant differences across the region.

In the spotlight: where next for improvement?

The "velvet divorce" between **Czech Republic** and **Slovakia** has led to two countries with similar levels of prosperity. They are ranked third and fourth in Eastern Europe and are ranked a dozen or fewer places apart in all but one of the nine pillars (Business Environment). Both have strong automobile export industries and both are each other's second largest export destination, behind Germany for both countries. The two countries score lowly for labour market flexibility, ranked 110th and 118th in this sub-pillar.

Croatia performs well generally, ranked eighth in the region, but it performs poorly in the Business Environment pillar, ranked 104th globally and positioned behind Ukraine in the region. It is perceived as a poor place to start a business, and has a high cost of doing so. Finance is hard to arrange and labour market regulations are numerous.

Romania, ranked 10th in the region (and 45th globally), improved its prosperity the most in the region over the past five years, climbing 16 ranks. Gains have been made across all pillars, with the biggest improvements in the Business Environment and Social Capital pillars. In contrast to the region's overall downward trend in Personal Freedom, Romania has risen in the past decade. Romania, and the whole region, perform particularly poorly in Health. Some of the reasons for this are high diabetes levels, high obesity and low vaccination rates.

Asia-Pacific (5th)

Overall picture of prosperity: continuing long-term growth

Asia-Pacific has been the fastest growing region over the past 10 years. It has also risen over the past year, despite scores declining in seven of 24 countries. All pillars have had a score increase in the past decade, with the exception of Safety & Security, which has remained level.

Many of the middle and lower ranking countries are improving prosperity levels at a higher rate than those at the top of the rankings. This year, the best improvers were **India, Bangladesh** and **Hong Kong**.

Pillar highlights: strong and growing Business Environment

Asia-Pacific is the third highest scoring region for Business Environment, with a significant increase in score over the past decade. This trend continued last year with rising scores in the access to credit and investor protection sub-pillars.

Asia is no longer last in the Natural Environment pillar and has overtaken Sub-Saharan Africa, in large part due to improvements in their wastewater treatment facilities.

Personal Freedom in the region is still low, but has increased slightly in each of the past three years, mostly due to greater social tolerance. However, basic legal rights in the region have declined in the same period.

In the spotlight: strengths and weaknesses

India now ranks 94th, and its prosperity score has risen the most in the past year, with all pillars except Social Capital improving. Governance is its highest ranking pillar and last year saw an increase in citizens' confidence in government. Other improvements include continued reductions in absolute poverty and an enhanced entrepreneurial environment, with easier access to credit, which improved the Business Environment rank by 11 places to 51st.

Cambodia's Governance score fell due to a reduction in their democracy level. They are ranked 100th overall and 130th for this pillar – they have now slipped behind China and are only ahead of Afghanistan for this pillar in Asia-Pacific. Their leader, Hun Sen, has now been in power for 33 years and has effectively instigated a one-party state.

Laos fell in the Social Capital pillar. Personal Freedom also fell in the country, with less tolerance towards immigrants and less satisfaction with the level of freedom.

Deaths from terrorism over a five-year period have decreased in **Pakistan**, which ranks 136th in the Index. This, combined with the continuing trend of improved living standards in the country has contributed to it having the third largest regional increase in prosperity over the past year.

Afghanistan is now last in the world rankings, after falling more than any other country. It fell most in Social Capital and Safety and Security. It ranks in the bottom 10 for six pillars and is no higher than 130th for any pillar.

Middle East and North Africa (6th)

Overall picture of prosperity: decline at a time of international growth

The Middle East and North Africa (MENA) is the 6th ranked region and is one of only two regions to experience a decline in overall prosperity this year, with 11 of 18 countries' prosperity scores dropping since 2017. The rest of the world, overall, has experienced an increase in prosperity. Despite a wide range of scores within MENA (Israel ranks highest at 37th and Yemen lowest at 147th) the region faces a common challenge in Personal Freedom, where all countries fall outside the top 100.

Pillar highlights: Business Environment improves whilst Personal Freedom and Safety & Security continue a trend of long-term decline

Despite an improvement over the last year, Safety and Security has fallen over the last 10 years. There has been a rise in the number of refugees coming out of Libya and Iraq in the past year, and the region has seen a sustained decline in national security. This is unsurprising given the proximity of many countries to Syria.

Business Environment has experienced a clear and consistent rise since 2007, where various countries have improved access to credit and ease of starting a business. MENA as a region has a disproportionate number of countries that have declined in this pillar over the last 10 years.

In Health, the level of obesity in the adult population rose in **every MENA country** this year, with the largest risers being UAE, Algeria, and Egypt. This is already a significant issue in MENA, with the percentage of the population classed as obese ranging from 26% to 38% across the region (excluding Yemen at 17%).

In the spotlight: risers and fallers

Despite improving across most pillars, **Turkey** saw a large drop in Social Capital this year, with large falls in the number of people saying they help strangers, the number of people volunteering, and the number of people giving donations. As the government has become more autocratic, Governance and Personal Freedom have declined.

Tunisia worsened in Personal Freedom this year, with fewer citizens satisfied with freedom, and the largest drop in the government religious restrictions score.

Lebanon saw a large fall in its Safety and Security score this year, due to a large increase in deaths from conflict. It also saw falls in Governance, Business Environment and Personal Freedom.

Whilst **Oman** ranks 52nd for Business Environment, it has made the second largest improvement in the ease of starting a business over the last 10 years in the region.

Israel ranks 22nd in Governance and it is the only country in MENA to receive the top score for political rights from Freedom House, which is a measure of electoral process integrity, political pluralisms and participation, and the functioning of government. It also comes 24th for voter turnout, at 76% in the most recent elections, and 52nd for the number of women in Parliament, at 27.5% representation.

Sub-Saharan Africa (7th)

Overall picture of prosperity: growth, but more needed

Prosperity in Sub-Saharan Africa increased slightly this year, continuing the trend of gradual improvement over the past decade. The gap between the rest of the world, however, is larger than in 2007, and the region remains the weakest performer.

Over the course of the past decade, 35 countries in the region increased their prosperity. There was mixed success for individual countries last year, with 20 countries improving their prosperity and 20 countries seeing it decrease.

Pillar highlights: mixed success

The region as a whole has grown strongly in the Business Environment pillar over the past decade, in particular in the entrepreneurial environment sub-pillar, where it is now the third highest scoring region. There has also been an improvement in the access to credit indicator. Malawi and Cameroon were the world's largest risers in the pillar overall.

Even with a decline last year, Sub-Saharan Africa performs strongest relative to the rest of the world in Social Capital, and is the third-ranked region.

Safety and Security in the region fell in the past year, continuing its downward trend. Sub-Saharan Africa is the least safe region in the world, and has been since 2007.

In the spotlight: regional leaders

Rwanda has seen the largest improvement in Business Environment over the past decade, by instigating several business reforms. These include reducing the time to start a business, accessing credit and strengthening investor protections. Rwanda also performs well in the Governance pillar, placing third in the region and top worldwide for female parliamentarians (61%). This is an area the region as a whole is strong in, ranking third out of all regions.

Kenya, as the second-highest ranking country in Social Capital in the region, ranks third highest in the world for volunteering and 20th for voter turnout.

South Africa is the second-highest ranking country in the region for Personal Freedom, which scores well for legal rights for LGBT relationships and government restrictions on religion have gone down from last year.

Ghana is the second highest performer in the Economic Quality pillar in Sub-Saharan Africa. Ghana has improved in this pillar over the past year with improvements in its export quality index, a reduction in its trade barriers and a reduction in absolute poverty, causing a rise of 18 places to become second only to Mauritius in Sub-Saharan Africa. Ghana also has a 77% labour force participation rate.

Namibia performs well in several indicators within the Natural Environment pillar; for instance it is seventh overall for protected land area with 38% of its area conserved. In 1990, it was one of the first African countries to incorporate environmental protection into its constitution.

Methodology and Acknowledgements

Methodology

The Legatum Prosperity Index™ is a framework that assesses countries on the promotion of their citizens' flourishing, reflecting both wealth and wellbeing. It captures the richness of a truly prosperous life, moving beyond traditional macro-economic measurements of a nation's prosperity, which rely solely on indicators of wealth such as average income per person (GDP per capita). It seeks to redefine the way we measure national success, changing the conversation from what we are getting to who we are becoming. This makes it an authoritative measure of human progress, offering a unique insight into how prosperity is forming and changing across the world.

To cover both wealth and wellbeing, and not just one or the other, the Prosperity Index faces the challenge of finding a meaningful measure of national success. We endeavour to create an Index that is methodologically sound. This is something that the Legatum Institute has sought to achieve with academic and analytical rigour over the past decade.

For the 2016 issue, the Prosperity Index was refreshed following a two-year methodological review, with the input of academic and policy advisors. The objective of the review was to get closer to a measure of prosperity that is transparent and policy-relevant, achieved by combining established theoretical and empirical research on the determinants of wealth and wellbeing. The Index captures the breadth of prosperity across nine pillars of prosperity using 104 indicators. We ensured that all indicators displayed a statistically significant and meaningful relationship with at least wealth or wellbeing. The 2016 edition of the Prosperity Index covered more countries and more variables, added a new Natural Environment pillar and captured new data sources.

For 2018, we have retained the methodology established in 2016. For more information on the methodology, please refer to the *Methodology Report* published at www.prosperity.com.

A country is given a score for each pillar. This score is based on that country's performance with respect to each of the indicators in that pillar, and the level of that indicator's importance (the weight assigned to each indicator), which is discussed in the *Methodology Report*. Finally, the pillar scores are averaged to obtain an overall prosperity score, which determines each country's rank. Each pillar contains around 12 indicators. We have also aggregated the indicators into sub-pillars, to capture an intermediate perspective. While the Index score provides an overall assessment of a country's prosperity, each pillar (and sub-pillar) score serves as a reliable guide to how that country is performing with respect to a particular foundation of prosperity.

We continuously monitor the quality and availability of global data, which is not constant. As a result of datasets being discontinued, or new datasets becoming available, we have updated some of the variables used in the Index. For example:

- Under the Health pillar, the World Bank replaced the variable called "Improved sanitation facilities", with two new variables: "People using at least basic sanitation services (% of population)", and "People using safely managed sanitation services (% of population)". We chose the first of these measures, because it had greater coverage and a higher correlation with the old measure.
- In the Natural Environment pillar, the air pollution measure has changed. In the latest data release, the Environmental Performance Index, has used a weighted average of four levels of air pollution, unlike previous years when it had used a different weighting system. We have used their new measure in this year's Prosperity Index.

- In the Economic Quality pillar, the International Monetary Fund (IMF) had not updated the Export Diversification Index since 2010. We therefore chose to replace the IMF measure with the Harvard Economic Complexity Index, which is a measure of export diversity.

In all cases, we updated the historical data. This resulted in some minor changes to scores and rankings for prior years; the overall effect, however, is small. A full list of changes and updates to variables can be found in the *Methodology Report*.

Note on averages

When calculating scores for regions, we take a population-weighted average score. This is because we want to capture the effect on individuals rather than countries. For example, if two countries improve their prosperity, then the more populous country has a greater effect on global prosperity than the less prosperous country.

The exception is in the riser and faller articles, where we use normal averages to calculate the changes over time. We did this because our interest was in the drivers of prosperity, and we wanted to treat each country equally so that more populous countries would not hide the positive changes made by smaller countries.

Pillars

The **Economic Quality** pillar measures countries on the openness of their economy, macro-economic indicators, foundations for growth, economic opportunity and financial sector efficiency.

The **Business Environment** pillar measures a country's entrepreneurial environment, its business infrastructure, barriers to innovation and labour market flexibility.

The **Governance** pillar measures a country's performance in rule of law, effective governance, and democracy and political participation.

The **Education** pillar measures access to education, quality of education and human capital.

The **Health** pillar measures a country's performance in basic physical and mental health, health infrastructure and preventative care.

The **Safety & Security** pillar measures countries based on national security, security of living conditions and personal safety.

The **Personal Freedom** pillar measures national progress towards basic legal rights, individual liberties and social tolerance.

The **Social Capital** pillar measures the strength of personal relationships, social network support, social norms and civic participation in a country.

The **Natural Environment** pillar measures a country's performance in the quality of the natural environment, environmental pressures and preservation efforts.

Step by step

1

Selecting the variables

We carried out an extensive literature review for each pillar looking at the academic literature on economic development and wellbeing. We first identified more than 200 variables that have an effect on wealth and wellbeing. This list was refined based on input from academic and policy experts in each pillar area, who advised on the reliability of data sources, alternative measures and the credibility of variables' measurement. This left us with a final list of 104 variables, distributed fairly evenly across the nine pillars.

2

Standardisation

The variables in the Prosperity Index are based on many different units of measurement, including numbers of individuals, years, percentages and ordinal scales. These different units need to be normalised for comparison between variables and countries to be meaningful. We employ a distance to frontier approach for this task. The distance to frontier approach compares a country's performance in a variable with the value of the logical best case as well as that of the logical worst case. As a result, the distance to frontier score captures a country's relative position. This approach also enables us to compare Index scores over time.

3

Variable weights

Each variable is assigned a weight, indicating the level of importance it has in affecting prosperity. Weights fall into four buckets: 0.5, 1, 1.5, and 2. Each variable by default is weighted as 1, and, based on its varying significance to prosperity, its weight may be adjusted downwards or upwards accordingly. For example, a variable with a weight of 2 means that it is twice as important in affecting prosperity as most other variables. Weights were determined by three factors, ordered according to priority: (1) the relevance and significance of the variable regarding the accumulation of material wealth and the enhancement of wellbeing as informed by the academic literature; (2) expert opinions offered by the Index's special advisors; and (3) the degree of compatibility with the Legatum Institute's view of prosperity as human flourishing across wealth and wellbeing.

4

Pillar scores

In each of the nine pillars, variables' distance to frontier scores are multiplied by their weights and then summed to generate countries' pillar scores. The countries are then ranked according to their scores in each pillar.

5

Prosperity Index score

The Prosperity Index score is determined by assigning equal weights to all nine pillars for each country. The mean of the nine pillar scores yields a country's overall Prosperity score. The overall Prosperity Index rankings are based on this score.

ABOUT THE LEGATUM INSTITUTE

The Legatum Institute is a London-based think-tank with a global vision: to see all people lifted out of poverty. Our mission is to create the pathways from poverty to prosperity, by fostering Open Economies, Inclusive Societies and Empowered People. We do this in three ways. Our Centre for Metrics creates indexes and datasets to measure and explain how poverty and prosperity are changing. Our Research Programmes analyse the many complex drivers of poverty and prosperity at the local, national and global level. Our Practical Programmes identify the actions required to enable transformational change.

For more information about the Prosperity Index or to speak to one of the Legatum Institute's experts, please email info@li.com
